“One-Source” Solution

## ADAPT-ID

Photo Identification  
Solutions from CTR Systems

## Overview

ADAPT-ID software allows for fast and easy in house creation of cards/badges that are personalized to your company's needs. Start with your choice of background; add your company logo as well as fields for first name, last name, department and a photo. For multiple use applications, ADAPT-ID also allows you to add functionality like barcode, magnetic stripe and smart card encoding all to the same card. Have more information you wish to add such as company address? ADAPT-ID allows for printing on both sides of the card.

## ADAPT-ID Entry

ADAPT-ID comes in three versions: ADAPT-ID Entry, ADAPT-ID Standard and ADAPT-ID Access. All three are simple and easy to learn. ADAPT-ID Entry is the entry level version designed for small to medium companies where a single database is adequate and a limit of five different card formats is acceptable.

The software includes one Access™ 2000 database and enables you to design and store five different card formats. This product allows the user to print single-sided or double-sided cards (requires duplex card printer) with or without industry-standard bar codes and encoded magnetic stripes.

This broad-use identification badging system includes a variety of additional features, such as:

- Storage of images, signatures and data for future use which makes reissuing cards simple and fast.
- Imports images from scanners, digital cameras, CCTV's and other sources.
- One click image capture from most Kodak digital cameras.
- Entry of up to 20 data fields.
- Does basic sort and search functions on database.
- Export of individual images.
- Prints special reports such as dossiers, seating charts and photo albums.
- Password based security.

## ADAPT-ID Standard

ADAPT-ID Standard is the intermediate software package that allows for an unlimited number of badge designs, databases and reports. Enhanced features such as networking capabilities and advanced security options work well in medium to larger environments such as larger corporations, colleges and government institutions.

In addition, unlimited data input screens allow you to organize easily your information. This flexibility, along with custom search and sorting options, allow you to arrange fields according to your needs.

In addition to the powerful features of ADAPT-ID Entry, the ADAPT-ID Standard software features include:

- Links to outside data sources.
- Unlimited number of databases, including support for Access, ODBC and OLE DB.
- Allows for different types and sizes of fields.
- Fully configurable user profiles.
- Mass image export.
- Storage of images inside or outside of the database.
- Storage of badge type with data record.
- Printing of badges, reports, dossiers and seating charts.
- Automatic printer selection.
- Full security audit trail.
- Fingerprint scanning support.

## ADAPT-ID Access

ADAPT-ID Access takes all of the functionality of ADAPT-ID and integrates with CTR's access control program, ADAPT Access Control. This integration allows the user to create cards and assign access rights for users from within the same application. Additionally, the digital photos captured are used by ADAPT-GUARD to confirm identities. As each card holder presents their badge to a reader, their digital photo is displayed to the guard station for visual confirmation.

- Unlimited number of images, such as different face profiles, fingerprints of all fingers, and multiple family members, can be stored and printed for each record.
- Distributed image storage.
- Automatic selection of badge type (design) based on information stored in the database.
